

Moeve and the Colegio Oficial de Graduados e Ingenieros Técnicos Industriales de Madrid will streamline the generation of Energy Saving Certificates (CAE) thanks to an innovative agreement

- **A CAE is an electronic document that certifies energy savings equivalent to 1 kWh over a one-year period. They play a fundamental role in a system that promotes the global search for energy efficiency in all productive, business, public, and private sectors**
- **This new partnership will promote the activation of energy-saving measures eligible to become CAEs through an innovative aggregation platform that will streamline management and processing, while also giving its members the opportunity to expand their professional scope**

Moeve and the Colegio Oficial de Graduados e Ingenieros Técnicos Industriales de Madrid (COGITIM) have reached a collaboration agreement related to the Energy Saving Certificate (CAE) system. This partnership will allow the energy company to acquire energy savings promoted by COGITIM members through the aforementioned institution's aggregation platform. This will significantly reduce processing times and improve accessibility for applicants, as well as establish a structured system for integrating information, which will ultimately facilitate the work of COGITIM members when creating documentation for energy saving actions that can be converted into CAEs. Additionally, this initiative will foster new opportunities in terms of employment and the development of knowledge and innovation chains while also boosting the access of energy savings owners, who will be able to benefit from the monetization enabled by the CAE system.

This CAE system was launched in 2023 by the Ministry for Ecological Transition and Demographic Challenge (MITECO) as a powerful and dynamic instrument to promote energy efficiency across all productive, business, public, and private sectors. These certificates accredit that an action has resulted in energy savings equivalent to 1 kWh during a one-year period. The great advantage of this instrument is that it makes it possible to monetize savings quickly and therefore recover part of the investment.

This is an incentive system that, according to official data, nearly 3,000 GWh of energy savings have already been submitted for certification since its launch, with an average compensation of over €100/Mwh of energy savings.

José Manuel Martínez, Executive Vice President of Technology, Projects and Services at Moeve, praised the creation of this collaboration framework: "For Moeve, it is a source of pride to sign this partnership agreement with such a prestigious and technically-sound institution as COGITIM that will allow us to promote energy-saving measures in a more agile and widespread manner, generating solid opportunities in terms of development, innovation, and

employment. This step forward in terms of aggregation, in collaboration with Moeve, will turn all those energy savings into CAEs and monetize this value chain. An activity intended to boost energy efficiency and sustainability, as well as the creation of knowledge chains and high-quality employment. All of these elements are key to continue moving forward in our Positive Motion strategy, with which we aspire to lead the energy transition by 2030."

José Antonio Galdón Ruiz, chair of the Colegio Oficial de Graduados e Ingenieros Técnicos Industriales de Madrid, added: "We especially highlight and deeply appreciate the outstanding willingness and collaboration shown by Moeve from the very beginning, which has allowed us to establish an efficient, solid, and transparent model that will lead to the implementation of a new service for our members, who, in turn, will be able to offer it to their clients — both companies and individuals — thus helping establish a virtuous circle of sustainable economy to drive the energy transition."

Moeve is a global company comprising over 11,000 employees, committed to sustainable energy and mobility, with the ambition to drive Europe's energy transition and accelerate decarbonisation both within the company and for its customers

After leading the energy sector as Cepsa for over 90 years, the company launched its new brand, Moeve, in October 2024. This new identity reflects the acceleration of its transformation to lead in the production of sustainable energy powered by green molecules, including green hydrogen and second-generation biofuels, as well as sustainable chemical products. It is also developing an extensive network of ultrafast electric chargers in Spain and Portugal to boost sustainable mobility.

Through its 2030 Positive Motion strategic plan, Moeve is working to transform mobility and energy to create a better world, ensuring today's energy supply while focusing on sustainable energy solutions for the future.

The **Colegio Oficial de Graduados e Ingenieros Técnicos Industriales de Madrid (COGITIM)** is a Public Law Corporation that brings together around 7,000 professionals committed to promoting innovative, sustainable engineering at the service of social and economic progress.

With a history spanning over 70 years, COGITIM represents and defends the interests of industrial technical engineers and industrial engineering graduates, promoting quality, ethics, and continuous training as essential pillars of professional practice.

In collaboration with government agencies, businesses, and civil society, COGITIM actively contributes to major current challenges such as the energy transition, digital transformation, and industrial efficiency, consolidating the role of engineering in the face of global challenges like climate change, urban sustainability, and Industry 4.0 and promoting opportunities for professional growth with the aim of enhancing society's well-being and safety.
